

# LearnPad

Bring Learning

to life with the

award winning LearnPad

## What is LearnPad?

LearnPad is an exciting new way for children to interact with today's digital content. It is a touch sensitive tablet computer, designed specifically for schools, that provides a safe and simple way to access a vast range of eLearning content, including applications, websites and Flash based activities, as well as videos, music, eBooks, documents, and other digital curriculum content. LearnPad features a secure, customisable user interface, providing a safe way for students to access only approved applications, content and websites. It has an integrated, secure full screen web browser that limits their ability to access non approved sites and helps keeps them focused on the activity at hand. LearnPad also provides access to network resources and shares, as well as supporting the widest range of digital eLearning content than any other tablet computer available today.

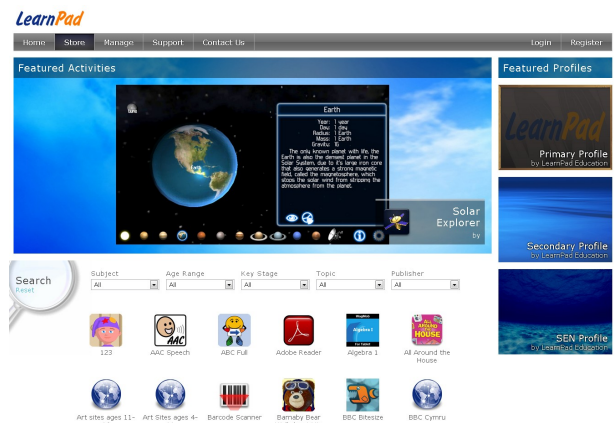

## Pre-installed Content Suite

LearnPad comes complete with a range of pre-installed content designed to meet specific areas of the teaching curriculum, across foundation, primary, secondary and special educational needs.

LearnPad also supports access to existing eLearning content, including office documents, audio and video files, VLE content and, unlike the iPad, Flash based activities and websites, from a host of leading publishers, including Educationcity.com, Sherston, Birchfield, Yellow Door, eChalk and many others.

## Online Curriculum Content Store

As well as pre-installed applications, LearnPad has a dedicated, curriculum aligned content store with hundreds of activities and profiles covering all subject areas. Looking for an activity to help with KS2 decimal fractions? How about a profile all about Dinosaurs? Use the content store to search by subject, topic, even keystage or age, and find the specific applications you require. See screenshots and get information on what the activity covers, then buy using a school purchase order, download and roll out to multiple LearnPads using the central management and content delivery portal. It really is as simple as that!

## Central Management & Configuration

LearnPad has a unique web based central management portal that allows teachers and network managers to configure and control multiple LearnPads from a simple interface. Use the portal to create customised LearnPad profiles that define which settings, configuration and content should be displayed to the user.

You can create as many profiles as you want, or have a single profile that all LearnPads belong to. Need to switch a LearnPad to another profile? Simply use the built in camera to scan a pre printed QrKey barcode and the new content and configuration is applied immediately!

The portal also allows you to create your own customised user interface for LearnPad, including defining your own categories, icons, layout and backgrounds. The portal brings advanced profiling to LearnPad, so you can set up multiple LearnPads just the way you want them, from one easy online interface.

## Content & Application Delivery

As well as centrally managing LearnPads, the portal has a custom designed Content delivery system, allowing teachers or network managers to upload, store and automatically deliver new applications and eLearning content directly to individual or grouped LearnPads, all from one central location.

Send your own documents, images, videos or flash content directly to LearnPad, safely and securely from a central portal. You can even find new applications in our content store, add them to your portal and deliver and install them silently to multiple LearnPads! Managing and delivering content to Multiple devices is quick, simple and efficient, and can even be done from home!

## Read what other schools are saying about LearnPad

*“This is a comprehensive product aimed squarely at schools and done with good understanding of what is required in a school and a networked environment.”*

Nigel McDonald—Network Manager, Miers Court Primary School, Kent.

*“Reception aged children are easily able to navigate to chosen websites and apps and find their way ‘home’. The lock down facility means they are more focused on the approved activities.”*

Victoria Pleasted—ICT Coordinator, South Marston Primary School, Swindon.

*“LearnPads are in high demand across teaching and learning. In short, the LearnPad gave Craven College everything that the iPad couldn’t.”*

Rob Gale—Head of eLearning, Craven College, Skipton, North Yorkshire.
